Spanish-born Cesar holds the role of Senior Land Surveyor. He has worked as a geomatic surveyor for more than 10 years, accumulating a depth of experience through projects for a wide range of clients.

He is currently a member of the land, site survey and technical support team, providing and procuring site surveying services to sections within NPS Property Consultants Ltd, as well as external public and private sector clients.

He employs HDS scanning techniques to produce detailed point clouds from measured building surveys to obtain any output required and oversees aerial and terrestrial photogrammetry services within NPS. This led to Cesar becoming a drone pilot and managing all operations within the field, from quoting, planning and gathering data to producing the outputs and drawings required by the client.

In 2018/19, the Association of Chief Estates Surveyors and Property Managers in the Public Sector (ACES) published an article in its journal The Terrier about his work with drone technology and its implementation within NPS Group.

Cesar is also an expert in CAD, Setting Out, Topographic Surveys and MBS, Photogrammetry, GIS, BIM and Programming and has worked on road signage projects for Transport for London (TFL).

“As an experienced geomatic surveyor I have worked on an extensive array of projects and have considerable expertise in the required technologies. One of my great passions, however, is working with laser scanner and drone technology and implementing it within the NPS Group.”
